But I another 5 options that I thought of last night! Joking, we are available to help in any way we can, and as mentioned last night we definitely have operational flexibility and can probably build a little more into the project if we need to (maybe 60 mgd during the summer and low 30s in the winter?). We can discuss trading capital at the plant versus pipeline.

Andy

Now that we have direction from the board to meet with Producers and WOCWB and focus on only 3 remaining options, we can start ironing out these details and hopefully shed some costs. I'm looking forward to only having three options to focus on!

John and Sandy – I'm still not clear on your calculation of water being apportioned in option 2A.

The City of HB is entitled to ~3 MGD, leaving 47MGD for the OCWD groundwater basin.

Option 2A shows 15 MGD flow through the Burriss pump station, 12 MGD through the Burriss Basin outlet and 15 MGD into the Talbert. That's a total 42 MGD, leaving 5 MGD for direct delivery to HB and Newport. How are you coming you with the 8 MGD?

This may be in the weeds and not matter in the grand scheme of things but I'm having trouble reconciling.
